

Commutative partially ordered semigroups edit

Abbreviation: CPoSgrp

Definition 1. A *commutative partially ordered semigroup* is a partially ordered semigroup $\mathbf{A} = \langle A, \cdot, \leq \rangle$ such that

\cdot is *commutative*: $xy = yx$

Remark: This is a template. If you know something about this class, click on the “Edit text of this page” link at the bottom and fill out this page.

It is not unusual to give several (equivalent) definitions. Ideally, one of the definitions would give an irredundant axiomatization that does not refer to other classes.

Morphisms. Let \mathbf{A} and \mathbf{B} be commutative partially ordered semigroups. A morphism from \mathbf{A} to \mathbf{B} is a function $h : A \rightarrow B$ that is an orderpreserving homomorphism: $h(x \cdot y) = h(x) \cdot h(y)$ and $x \leq y \implies h(x) \leq h(y)$.

Definition 2. A ... is a structure $\mathbf{A} = \langle A, \dots \rangle$ of type $\langle \dots \rangle$ such that

... is ...: *axiom*

... is ...: *axiom*

Basic Results.

Examples.

1.

Finite Members. $f(n)$ = number of members of size n .

$$\begin{array}{ll} f(1) = 1 & f(6) = \\ f(2) = & f(7) = \\ f(3) = & f(8) = \\ f(4) = & f(9) = \\ f(5) = & f(10) = \end{array}$$

Subclasses.

Commutative partially ordered monoids expansion

Superclasses.

Partially ordered semigroups supervariety

Commutative semigroups subreduct

Properties. (description)

Feel free to add or delete properties from this list. The list below may contain properties that are not relevant to the class that is being described.

Classtype	(value, see description) [?]
Equational theory	
Quasiequational theory	
First-order theory	
Locally finite	
Residual size	
Congruence distributive	
Congruence modular	
Congruence n -permutable	
Congruence regular	
Congruence uniform	
Congruence extension property	
Definable principal congruences	
Equationally def. pr. cong.	
Amalgamation property	
Strong amalgamation property	
Epimorphisms are surjective
